Rad Gnar Products understand the pain that many cyclists face - the challenge of finding safe and convenient transportation methods for their bikes. Our solution is simple yet revolutionary: we offer the most innovative and user-friendly bicycle racks that not only address loading issues but also create a modularity experience for long term lifestyle variability.

Our racks are not just utilitarian; they are a seamless blend of form and function, making them the perfect addition to any consumer's adventure arsenal. With a focus on sustainability, we strive to use eco-friendly production methodology, ensuring that our products not only support cyclists but also contribute to a greener environment.

The Value is clear:

Innovative Design: Our racks are designed to combine a rugged architecture that appeals to both urban and overland environments, adding aesthetic value to the back of customer's vehicles.

Durable and Secure: We prioritize quality to ensure our racks are robust and provide secure transportation, giving adventure seekers peace of mind.

User-Friendly: Our racks are designed for easy bike loading and unloading, making it a hassle-free experience for users.

Eco-Friendly Materials: We are committed to sustainability, sourcing and production within the USA to eliminate the cost to the environment seen in overseas production.

Custom Solutions: We offer the only truly configurable rack option on the market to meet the specific needs of our clients and their unique bikes.

RADGNARACK

(rad nar rack)

Modular Racks Redefined

The system is called the RadGnaRack; pronounced rad nar rack. This Patent Pending product is designed to grow with the customer.

The first variations are focused on bicycle transportation with the needs of both eBikes and traditional bikes being addressed. The attachment bar we've created will never change. This is because we believe all good things start with a solid foundation. It is designed with an alternating top and side hole pattern to allow flexibility in future configurations.

Modular Racks Redefined

ALL BIKE MOUNT

The first of many modules, the All Bike Mount comes in 2 standard colors; Hel (Black) and Valhalla (White). This is available for purchase as a standalone component or in a package with the Modular Bar.

MODULAR BAR

The heart of the system. The Modular bar is currently available in 4 configurations; high or low clearance, single or double long. The bar is crafted from 3/16 steel wall tubes using single piece construction allowing for maximum strength. Capable of an extremely high load capability of 500 lbs, this bar is designed to be capable of handling anything that's thrown at it.

ALL BIKE MOUNT

HOW IT WORKS

Crank Retention

Using this common component to secure a bike for transportation just made too much sense in trying to figure out an all in one solution. This allowed us not to be concerned with the challenges of different frame geometries, wildly varying tire sizes, and various accessories attached to bikes. Not to mention the bottom bracket is the engineered strongest point of the bike.

Tire Trays

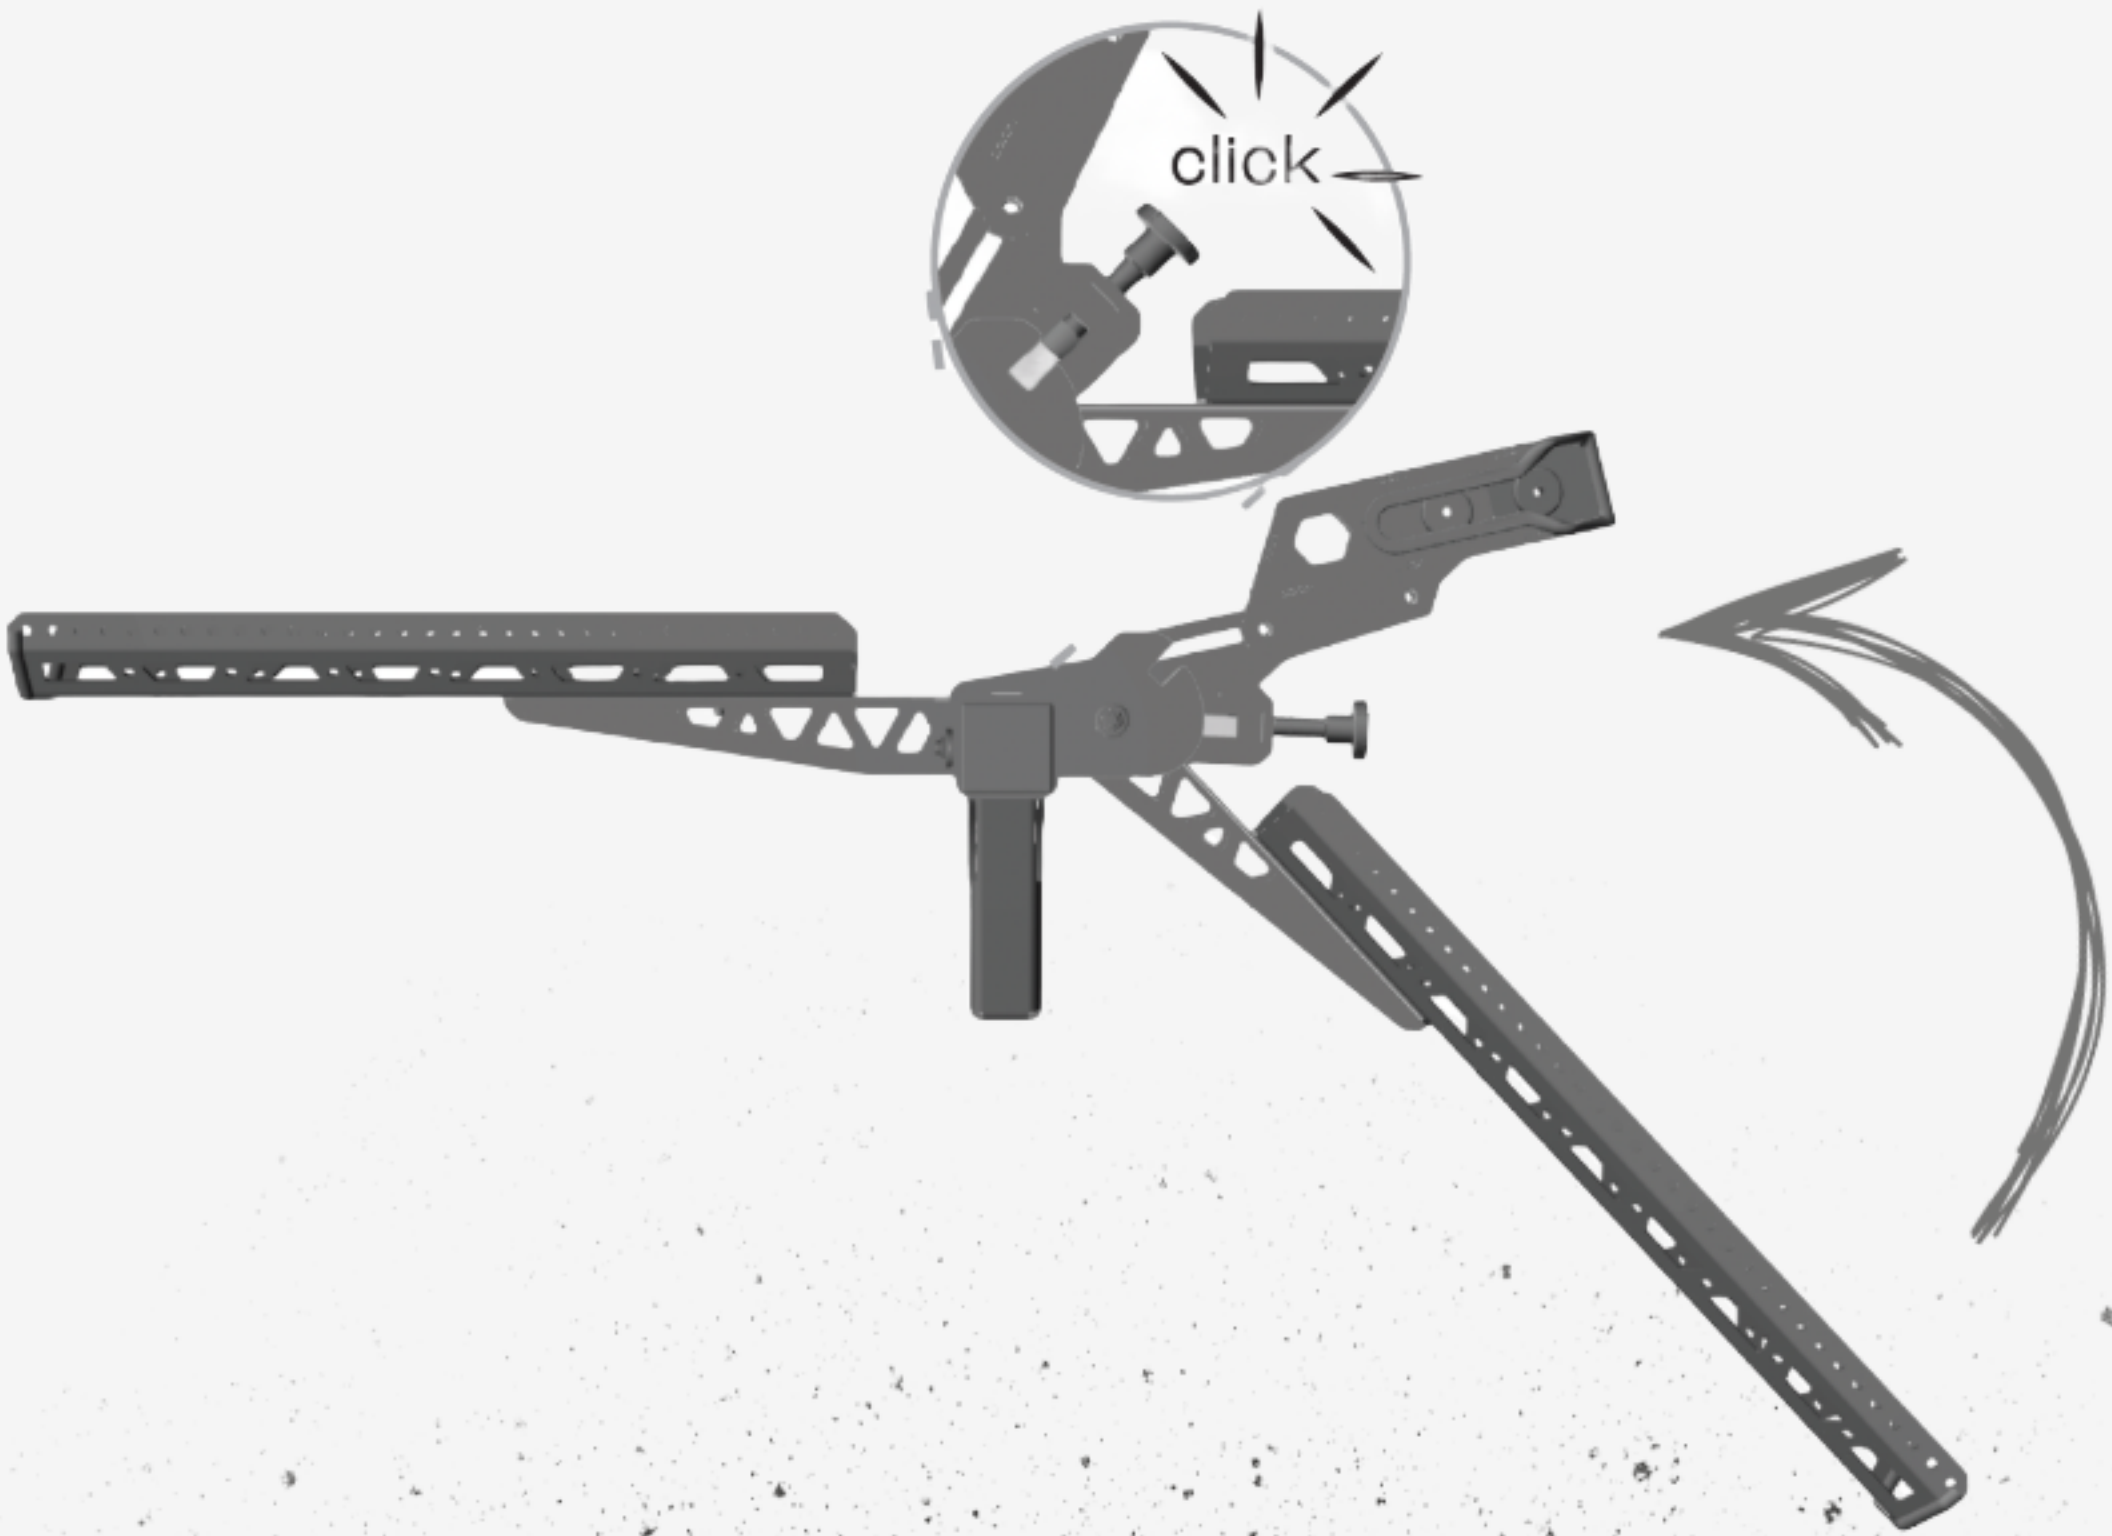

We've designed a tire tray to work from the skinniest of road tires all the way up to 5 inc fatties. We don't believe in having to buy additional items to make a rack work for you. The slots in the trays not only shave weight and look good, they are there for the tire straps to secure skinnier tires and minimize wobble.

ALL BIKE MOUNT HOW IT WORKS

Pivot Mechanism

Picking up heavy stuff bikes no fun for most of us. Additionally, having to buy attachments and add-on components to get a bike onto a rack is frustrating. Our patent pending solution to this problem is both simple and effective. We use a hinge and latch mechanism allowing simple leverage to assist in loading the bike onto the rack.
